BEST BATTERY CHOICE

– extend battery life through optimized battery replacements

Maximize battery charging room efficiency and extend battery life through proper changing and rotation of batteries with Best Battery Choice (BBC). Batteries that are convenient and easily accessible are most likely to be used more in the battery room. With a battery exchange system, such as BBC, operators will get direct information about which battery to select.

This will optimize and extend the life of your battery investment and ensure that no battery is worn out prematurely or not used enough.

Easy Communication with Operators

When entering a battery charging room operators will see exactly which battery that is ready to be used. A prioritizing system starts when activating BBC and communicates to the operator which battery to use based on the battery's State of Charge.

In this way, batteries are used in the most optimized way. BBC are available in Micropower products and works wireless without any extra hardware.

Best Battery Choice – The Natural Choice

Micropower has been setting up charging rooms for industrial businesses for decades. A system, like Best Battery Choice is, and should always be:

- User-friendly and logical
- Automatic without need for interference
- Pro-long life of battery investment and decrease cost
